

**GEOG 5900, CLIMATOLOGY**  
**Spring Semester 2018, 3 units, Call number: 34706**  
**Lectures: TuTh 12:45-2:05 PM, Derby Hall 1080**

**Instructor:** Dr. Jialin Lin

**Email:** lin.789@osu.edu This is the best way to reach me.

**Telephone:** 614-292-6634

**Office:** 1128 Derby Hall

**Office Hours:** TuTh 10:00-11:00am, or by appointment

**Teaching Assistant and Instructor for Labs:** Dr. Daniel D'Amico

**Email:** damico.43@osu.edu

**Telephone:** N/A

**Office:** 1048 Derby Hall

**Office Hours:** Tu 2:30-3:30pm, W 12:00-1:30pm, or by appointment

**Textbook: "Understanding Weather and Climate" (7th ed.) by E. Aguado and J. Burt (published by Prentice Hall).** (Has been ordered at the OSU bookstores.)

**Course Objectives:**

This course is designed to provide a broad introduction to *climatology*, the study of the average state of weather on planet Earth. Emphasis is made of planetary energy budgets, regional climates, climate change, and past and future climates. Energy budgets include the solar energy receipt, infrared radiation loss, turbulent heat fluxes, and the redistribution in the earth-atmosphere system as well as the role of atmospheric moisture, its global spatial distribution, and its importance in energy exchange, and cloud and precipitation formation. Course lectures will describe the causes, and the spatial distribution, of climates of the world as well as the physical mechanisms of some observed weather phenomena. The physical causes of and spatial variations in small- and large-scale motions of the atmosphere will be described. The distribution and causes of 21<sup>st</sup> century climate will be explained and the distributions of past climates, methods for reconstructing them, and the potential explanations for them will be discussed. The course will also consider how humankind has both intentionally and unintentionally become a factor in the physical processes of weather and climate. Many students will find the basic concepts and ideas discussed in the course will have applications in their fields of interest as well as applications to their daily lives.

Upon successful completion of this course, students should (1) be able to describe the structure and composition of the atmosphere and how it has changed with time; (2) know the factors causing solar radiant energy variations on earth and be able to describe global radiation balance; (3) be able to explain the physical processes leading to the formation of atmospheric features including clouds, precipitation, winds and storms; (4) have a good understanding of the physical behavior of gases, and of the different forms of energy and their role in atmospheric motion and weather systems; (5) have a good understanding of environmental issues pertaining to the atmosphere including the "greenhouse effect", ozone depletion, air pollution and urban climate modification; and (6) be able to describe the general distribution on the world of temperature, precipitation and climates - and the factors and physical mechanisms which cause these distributions to occur as they do.

## Methods for accomplishing these objectives:

The objectives of the course will be accomplished through the lectures, homework/assignments, in-class presentations, and examinations. The lectures will include some material not covered in the textbook and may incorporate math to the level of algebra. Determination of your grade will be as follows:

Pop quizzes or attendance check (11 total – will drop your worst score)	10%
Three midterm exams (45% each, will drop your worst score)	90%
• All exams will be multiple-choice. Midterms are not cumulative.	
(Bonus) Weather diary (40 days)	10%

The grading scale is as follows: 100-93% A, 92-90% A-, 89-87% B+, 86-83% B, 82-80% B-, 79-77% C+, 76-73% C, 72-70% C-, 69-67% D+, 66-63% D, 62-60% D-, 59% and below E.

**Academic Misconduct** It is the responsibility of the Committee on Academic Misconduct to investigate or establish procedures for the investigation of all reported cases of student academic misconduct. The term “academic misconduct” includes all forms of student academic misconduct wherever committed; illustrated by, but not limited to, cases of plagiarism and dishonest practices in connection with examinations. Instructors shall report all instances of alleged academic misconduct to the committee (Faculty Rule 3335-5-487). For additional information, see the Code of Student Conduct ([http://studentaffairs.osu.edu/info\\_for\\_students/csc.asp](http://studentaffairs.osu.edu/info_for_students/csc.asp)).

**Disability Services** Students with disabilities that have been certified by the Office for Disability Services will be appropriately accommodated, and should inform the instructor as soon as possible of their needs. The Office for Disability Services is located in 150 Pomerene Hall, 1760 Neil Avenue; telephone 292-3307, TDD 292-0901; <http://www.ods.ohio-state.edu/>.

**Cell Phones** Like on airplanes, interfere with navigation of the course, therefore, cell phones and pagers must be turned *OFF* during class as they interfere with the navigation of the course.

## Some Tips for Doing Well:

1. Pay special attention to the “Review of last lecture” slide at the beginning of class and the “Summary” slide at the end of class. Those are the materials you need to remember, and will be asked about in exams.
2. Check the course website frequently for updates.
3. Enjoy the weather diary.
4. Relax and have fun.

**Final Exam:** No final exam

The schedule may change, probably only slightly, as the class evolves. Instructor will alert students if/when schedule changes.

## COURSE LECTURE OUTLINE

Date	LECTURE
01/09	Syllabus and course introduction
01/11	Overview I: Extreme weather and climate
01/16	Overview II: Success and failure of weather and climate prediction
01/18	Overview III: Why is it so difficult to predict weather and climate?
01/23	Evolution of the Earth's atmosphere
01/25	The incoming solar energy
01/30	What is the Greenhouse Effect?
02/01	Vertical Structure of the atmosphere
02/06	What set the atmosphere in motion?
02/08	How does air move around the globe?
02/13	Midterm 1 Review
02/15	MIDTERM 1
02/20	The global water cycle
02/22	How do the clouds form?
02/27	Why does it rain on us?
03/01	Thunderstorms and Lightning
03/06	Twisters
03/08	Mesoscale convective systems and Downbursts
03/13	Spring Break (NO CLASS)
03/15	Spring Break (NO CLASS)
03/20	Midterm 2 Review
03/22	MIDTERM 2
03/27	Where do the hurricanes come from?
03/29	How do the blizzards form?
04/03	What are the El Nino and La Nina?
04/05	Land surface change ( <b>Guest lecture by Dr. Daniel D'Amico</b> )
04/10	Observation of global warming ( <b>Guest lecture by Dr. Daniel D'Amico</b> )
04/12	How will the climate likely be at the end of this century? ( <b>Guest lecture by Dr. Daniel D'Amico</b> ) ( <b>Weather Diary due</b> )
04/17	Midterm 3 Review
04/19	MIDTERM 3
