

# DEREGULATORY SCIENCE

FOSSIL FUELS AND CHEMICAL RISK ANALYSIS IN TRUMP'S EPA

Becky Mansfield, Professor,  
Department of Geography

The Ohio State University

MARCH 19, 2021 | FRIDAY @ 3:30 PM

All deregulatory actions of Trump's Environmental Protection Agency have the air pollutant particulate matter at their center which demonstrates both the centrality of fossil fuels and the racial dynamics of deregulation, as particulate matter contributes to racial disparities in health outcomes generally and the coronavirus. This presentation will work through aspects of policy that demonstrate these actions are not only attacks on regulation but also on regulatory knowledge and how the Trump Administration's EPA installed a racist, fossil-fueled regulatory science.
