**2:30 PM**

**In the Sharpe Innovation Commons**

The Geospatial program at the U.S. EPA is a success story of pragmatic, grassroots cross-discipline initiative overcoming bureaucratic resistance and inertia. This presentation will discuss what's unique about geography at the EPA, highlight several flagship mapping applications, and reflect on career perspectives for the next generation of environmental geographers.

Torrin Hultgren has been a developer, architect, and project manager on EPA's National Geospatial Support Team since 2005, supporting initiatives such as EPA's GeoPlatform, the Environmental Dataset Gateway, and EnviroAtlas. He has a M.A. in Geography from the University of Colorado.
