Dr. Darla Munroe graduated with a BA from the University of Colorado in 1993, an MA from the University of Michigan in 1995 and a PhD from the University of Illinois in 2000. Munroe’s academic background is in land economics and human geography, with a focus on human-environment interactions at a landscape level. She studies how changes in land-use systems, such as urban conversion or shifts in agricultural production patterns, affect forests and forest characteristics. This will be a hands-on, immersive session from USDA-funded project in Appalachian Ohio’s forests.
