

GIS Technician Opportunity

Location: Near San Jose, CA

Company: Apex Systems, Inc.

Client: Fortune 50 Technology Company

Duration: One year

Key Qualifications

Required:

- Deep understanding of spatial concepts and theory
- Experience with Geographic Information Systems, proprietary or open source
- Detail-oriented
- Strong web-research skills, including the use of web-based maps
- Adept at working with large data sets with an ability to identify patterns
- Demonstrated ability to work independently, as well as in small and large cross functional teams
- Strong computer literacy
- Strong verbal and written communication skills
- Understand cartographic principles

Highly Desired:

- 1+ year of experience in geospatial data analysis or map quality evaluation
- Bachelor degree in Geography, GIS, Computer Science or similar
- Ability to draw conclusions from data and recommend actions
- Experience querying databases using SQL
- Experience scripting with Python
- Experience with other programming languages

Description:

Responsible for content analysis, validation, cleansing, collection, and reporting. Analyze and validate data content and assemble new content from various sources, including databases, files/spreadsheets, and websites. Respond to data inquiries from various groups within an organization. Create and publish regularly scheduled and/or ad hoc reports as needed

Education:

BS/BA or MS/MA in Geography, GIS, or Engineering

Hi,

My Name is Natalie and I'm a Technical Recruiter at Apex Systems Inc. We are the 2nd largest IT staffing firm in the US with over 60 offices. My colleagues and I are still working on filling multiple GIS Technician openings for our Fortune 50 client. We have openings at the end of this month, May, and June, so I thought you might be interested in passing around the job description I've attached as well as the flyers and my contact information. We've hired on over 200 GIS Technicians the last 11 months and so far this has been a great entry-level opportunity for recent graduated in the GIS field.

We've signed a non-disclosure with our client so I can't specifically tell you the name of the company, but I can say that they are one of the world's largest information technology companies. Our client currently has a mapping application out on the market that they are working to make a lot more competitive and user-friendly.

This opportunity has a three-part interview process.

- Send resume to nmacdonald@apexsystemsinc.com, set up a phone screen and go over specific job details and their technical background.
- If all goes well set up for facetime/skype. After interview I can let them know who the company is.
- If it sounds like an opportunity they'd like to move forward with I can set them up for a final facetime/skype interview with our relationship manager who sits on site at our client's location.

I would love to chat with anyone who may be interested! Thank you so much for your time and if you have any questions regarding the position or my company feel free to call me any time.

Very Best,

Natalie MacDonald | Technical Recruiter | Apex Systems
